

A B S T R A C T

5 The invention relates to a package (1) comprising at least
two opposite walls (3, 5) which are bonded together along a
longitudinally extending bonding seam (16, 17). Each wall (3, 5)
comprises at least two bonded-together wall members (6, 7; 8, 9), which
are folded onto each other about a fold line (10, 11), wherein parts (26,
10 27) of the walls (3, 5) positioned on either side of the wall members (6,
7; 8, 9) can be moved away from each other in directions (P1, P2)
extending parallel to the longitudinal direction of the bonding seam (16,
17), wherein the opposite wall members (6, 7; 8, 9) can be moved apart,
15 bounding an opening that gives access to a space present inside the
package (1).
